

MAB 200

CENTRIFUGAL MEDIUM & HIGH PRESSURE FIRE PUMP

The MAB 200 is a centrifugal type pump, four-stages on one axle, which can be used both simultaneously and independently in Medium and High pressure.

Body and impellers are made of Bronze; the shaft is made of high grade stainless steel, with special graphite sealing rings, which does not need periodical maintenance.

The pump can be fitted with either two or three-gear multiplying gear-box allowing an easy coupling to the vehicle Power Take Off and a low revolution rating of the propeller shaft.

Pump Output:

Medium Pressure;	2.000 lpm at 7 bars
High Pressure;	360 lpm at 40 bars

In its standard configuration the pump is complete with suction inlet of 4" from external source.

The pump is also equipped with two outlets \varnothing 2 1/2" for Medium pressure and two \varnothing 1 1/2" for High pressure.
