

# MAB 300

## CENTRIFUGAL MEDIUM & HIGH PRESSURE FIRE PUMP

The MAB 300 is a four stage centrifugal pump which can be used both simultaneously and independently in Medium and High pressure.

Body and impellers are made of Bronze; the shaft is made of high grade stainless steel, with special graphite sealing rings, which does not need periodical maintenance.

The pump can be fitted with either two or three-gear multiplying gear-box allowing an easy coupling to the vehicle Power Take Off and a low revolution rating of the propeller shaft.

### **Pump Output:**

**Medium Pressure;**                      3.000 lpm at 10 bars  
**High Pressure;**                         400 lpm at 40 bars

In its standard configuration the pump is complete with suction inlet of 4" or 5" from external source.

The pump is also equipped with four outlets dia. 2 ½" for Medium pressure and two dia. 1 ½" for High pressure.
