

## Magirus New MLF Daily - Perfect Security

*Evolution of the popular MLF - now with new TEAM Cab*

Ulm, 8 June 2015

Robust, individual and comfortable - Magirus has revolutionised its mid-sized all rounder vehicle used by many fire departments: the newly redesigned MLF Daily. By combining the New Daily with the new TEAM Cab, Magirus has created a completely new vehicle that significantly facilitates the day-to-day work of fire departments. This compact vehicle is being shown for the first time at the 4000 m<sup>2</sup> Magirus Stand in Pavilion 32 of the Interschutz trade fair in Hannover.

Safety and convenience were the top priorities of Magirus engineers when redesigning the Daily. The new chassis with a robust frame made in heavy-duty steel once again sets it apart from its competitors in this segment. The MLF scores points in terms of manoeuvrability as well. Particularly in inner cities, this is a great advantage that can significantly influence the response time during the intervention.

### **Modular Design for even more Flexibility - AluFire 3**

With a gross weight of from 3.5 to 7.2 tonnes, this fire engine is also a light-weight vehicle that can simultaneously carry a high payload. The light AluFire 3 aluminium superstructure has a great deal of storage space for any type of fire-fighting equipment. Due to the open space left to right, equipment can be loaded in flexible way from the ceiling to the floor of the compartment. All space is thus used best and the modular design has no limits on flexibility or individuality. The specially designed aluminium profiles are highly resistant, stable and extremely long-lasting. Due to the sophisticated design concept no foldable steps at the superstructure are necessary. In addition, the New Daily is equipped with the unique Magirus CAN-Bus technology.

### **Comfortable and Safe - The New TEAM Cab**

A special highlight of the New Daily is the new TEAM Cab. The cab, developed on the basis of an international ergonomics study, also meets the highest demands for comfort and safety. More storage volume, USB ports, monitors for better mission oversight, continuous LED illumination as well as a wide, 90° door opening are only some of the highlights of the new TEAM Cab. Based on a modular system, the dimensions of the cab as well as its interior configuration are variable. The New Daily can thus be set up for a crew of 1+5 or - in the long version - 1+8.

### **About Magirus**

PRESS RELEASE

*Passion and precision, high-tech and craftsmanship. Since 1864, Magirus combined innovation and tradition to assist fire-fighters throughout the world. With a comprehensive range of the most modern and reliable fire engines, turntable ladders, rescue and equipment vehicles, special solutions, pumps and portable pumps, Magirus is known throughout the world as one of the largest technological leaders for fire-fighting and disaster control technology.*
