The new DRAGON X6 NEO - Maximum ARFF performance for airport fire brigades with powerful Euro 6 engines and the new Magirus DynamicEdge design

Visit the new DRAGON X6 NEO this week at the Florian trade fair in Dresden!

- New powerful Cursor 13 engines enable the best acceleration among Euro 6 engine- competitors
- State-of-the-art technology with modern electronic braking system and electronic stability program (ESP)
- Significantly improved driver friendliness by the new EasyOperator human-machine interface (HMI) with larger display
- The Dragon X6 Neo presents itself in the new Magirus DynamicEdge design

Ulm - With travel volumes increasing again worldwide and passenger numbers rising after the coronavirus pandemic, airports are facing a growing challenge: greater safety. The fire department must be able to act even faster in an emergency, and this is where the new Magirus DRAGON X6 NEO comes in - the most powerful airport firefighting vehicle in its class.

The DRAGON X6 NEO, as a modern combustion vehicle, impresses with its exceptional driving performance. With a "2-engine strategy", it accelerates to 80 km/h in less than 20 seconds, enabling emergency services to reach every corner of an airport in the shortest possible time. This impressive performance makes it the vehicle with the best driving characteristics on the market.

| Technical features at a glance | |
|---|--|
| Emission | Euro 6 Step E (latest emission standard) |
| 2 Cursor 13 engines (latest generation) | 2x 570 HP (419KW), total 1140 HP (838 KW) |
| Torque | 2x 2500 Nm @1000 rpm, in total 5000 Nm |
| Acceleration | 0-80.5 km/h in less than 20 seconds (ICAO standard requires 40 sec) |
| Pump and roll | Thanks to TEP architecture full pumping power at any speed (electronically limited to 70 km/h) |

New design and innovation: future-proof and environmentally friendly

The new DRAGON X6 NEO not only presents itself with a completely revised front section that emphasizes the dynamic design, but also impresses with a modern appearance that extends to the rear section. According to Thomas Hilse, CEO of Magirus, driver-friendliness has been significantly improved by the new EasyOperator human-machine interface (HMI) with a larger display. This gives the vehicle crew clear and easy access to all controls. "This HMI will be found in all Magirus product lines in the future," says Hilse.

In addition, the integration of FleetConnect offers innovative fleet management options that ensure optimized coordination and maintenance of the emergency vehicles. The DRAGON X6 NEO meets the strict EURO VI emission standards and therefore offers not only maximum performance, but also environmental friendliness and future-proofing.

Safer, smarter, available from Q2 2025 and available to order now

In addition to exceptional driving performance, the DRAGON X6 NEO has been equipped with an electronic braking system and an electronic stability program to ensure safety and control in all conditions. Marc Kuntz, Director Sales & Customer Service comments: "The new design and innovations of the Dragon X6 Neo will be incorporated into the entire airfield firefighting vehicle family from the second quarter of 2025."

The Magirus DRAGON X6 NEO is the epitome of a modern airport firefighting vehicle - powerful, fast and future-proof. Thanks to its high performance, innovative technology and environmentally friendly features, it sets new standards in firefighting and safety at airports worldwide.
